TATA

Exploring an amazing material

Your technical career at Tata Steel

Human ingenuity has improved and diversified the steelmaking process for hundreds of years. Our technologists help our customers keep ahead of the curve, developing better, stronger and more specialised steels for new applications.

KNOWLEDGE, RIGOUR AND INNOVATION **THE PERFECT BLEND**

TECHNICAL

Joining our technical division in this varied role, you'll develop and improve all grades of steel. From titanium or vanadium alloys, to high silicon for electrical use or high carbon steels for aerospace, you'll play a vital role in keeping our range of steels ahead of the market.

Your remit may include plant operation and development, plant process chemistry and metallurgy and quality assurance, so you need excellent technical skills with a creative and analytical mind. The ability to explain complex concepts in simple terms will also be key.

Our steel builds the world
