## 2 Basis prices

The basis prices on page 6 to 10 apply to the following:

### Weight

The standard weights are derived from the cross sectional area on the basis of 0.785 kg per cm<sup>2</sup> per metre length. The maximum weight of an individual bar is 15 tonnes.

The weight to be charged will be the calculated weight based on the weight per metre (1 decimal point) as specified in BS4-1, EN10056-2 and the current Corus *Advance* sections brochure as appropriate, multiplied by the ordered length.

### Note

The third element of the section designation is that detailed within the appropriate standard and should not be used to calculate or verify invoiced weights.

### Rolling tolerances

All *Advance* sections are rolled to the tolerances in EN10279, EN10034, EN10056-2, BS4-1 and the current Corus *Advance* sections brochure as appropriate.

### Quality

EN10025-2 Grade S275 JR, with the exception of Asymmetric Slimflor Beams (ASB) (Page 9).

### Quantity

Each order or specification for a quantity of 10 tonnes and over, of one quality, one serial size of section and one thickness for one delivery to one destination.

### Tests

Material will be tested in accordance with the relevant standard. One copy of the test certificate will be routinely supplied to the customer by Corus.

### Length

Basis prices apply to lengths in the range 9,000 to 18,500mm in 100mm increments, except as indicated in section 3.2 on page 11. These lengths are offered to the tolerances as specified in the relevant product standards: BS4-1; EN10034; EN 10056-2, EN10279 and the current Corus *Advance* sections brochure as appropriate.

### Labelling and marking

The brand identifier *Advance* is rolled into the web of all sections.
