

## TATA STEEL DELIVERY PLAN

# **Customer / Delivery Point Name and Address:**

DLS Regen Main Yard

Daytime telephone number: No available number

Out of hours telephone number: No available number

## **Delivery Times:**

Day	From	Until		
Monday	7am	5pm		
Tuesday	7am	5pm		
Wednesday	7am	5pm		
Thursday	7am	5pm		
Friday	7am	5pm		
Saturday	Closed	Closed		
Sunday	Closed	Closed		

Periods of unavailability: Christmas, Weekends

## **PPE requirements** (circle as appropriate):

## Additional PPE requirements:

## **Reporting Arrival:**

Who / where should the driver report to on arrival to the site? Report to individual on entrance gate

Are there any parking or vehicle waiting restrictions? If it is not possible to park within the yard, park externally

## **Discharge Points:**

What is the site speed limit? 20 mph

Do any 'one way' systems operate on your site that a delivery driver should be aware of? Yes

Is the Delivery Point INDOORS or OUTDOORS? Outdoors

Is reversing required? On occasions, reversing requirement is load dependent

If yes, who provides the Banksman / how can they be contacted? The machine driver is available at the yard What is the method of unloading? E.g. Forklift truck, Overhead Gantry Crane Tipping / some areas via machine grab Where should the driver be positioned during unloading? Dependent on load, either in cab or safe haven Is there access equipment available for the driver to access the trailer bed if needed? A platform is available if required

Is there a minimum gap required between the products and / or the headboard? N/A Do the deliveries require to be sheeted (*Tubes only*) Yes when applicable

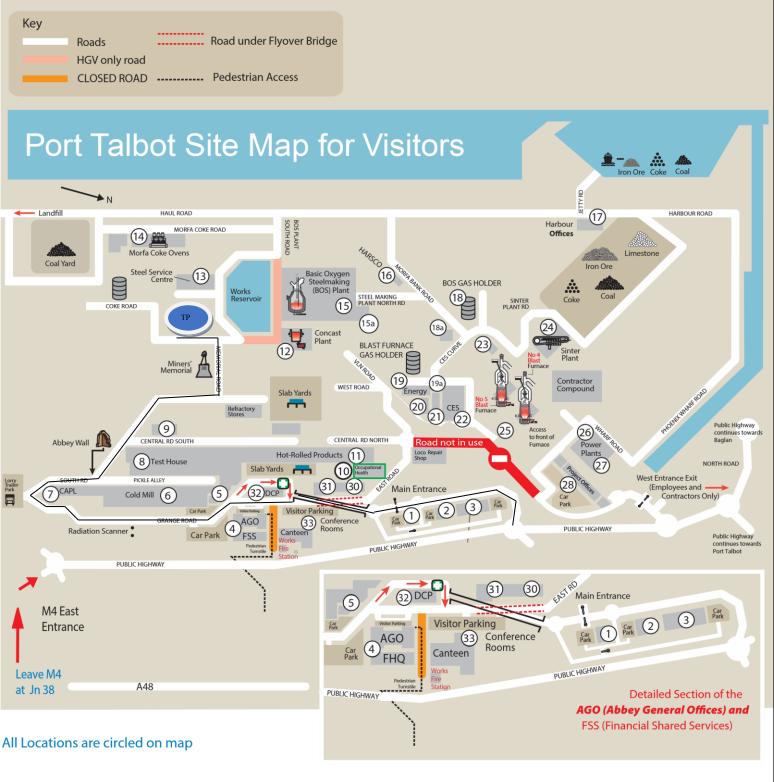

Site Limitations: Net weight 25 tonne, information captured on weighbridge

## **Additional Information:**

Is there any additional information that a driver would need to safely deliver a load to your premises?

None

Note to TSE: Ensure that the driver is not expected or required to physically assist with the unloading process

# **Tipping Location Risk Assessment**

Location name: TATA Steel - Port Talbot - DLS Regen Main

Yard

Address: Abbey Works

Port Talbot South Wales SA13 2NG

Date of Assessment: 25/08/2020

Assessor's name: Ben Smith

Assessor's Signature: Ben Smith

**Position in Company: Vehicle Standards Officer** 

### **Guidance Notes for Completion of Risk Assessment**

#### 1. Identify the Hazard and who is at risk (columns 1 &2)

- Walk around the workplace and list the hazards that may cause harm during normal work activities. Take into account any Occupational/Environmental Hazards and use a selection of people at the location to help provide information and/or assistance in completing the risk assessment.
- Consider the number of people involved, their awareness of hazards, training and physical capability. (Remember that other people could be affected by the actions of our employee(s) whilst carrying out their duties)

### 2. Quantify the Risk. Prior to control measures being introduced, you should consider the following:

- Using the numerical guide in the Likelihood/Severity Matrix below, indicate what the likelihood of the injury would be if the hazard were to cause an accident and put the corresponding number in the third column. Now consider the severity of an injury using column four.
- In column 5, Multiply out the Likelihood and Severity numbers to give the hazard identified a risk rating.
- Based on your findings, you will now need to evaluate controls to minimise the risk and reduce the risk rating.

### 3. Evaluate the controls required

- What are the control measures in place already to control the hazard/risk identified? Include these in column 6
- Question if there sufficient safety signage? Remember if you cannot eliminate the risk altogether you will need to control or reduce the risk so that harm is unlikely.
- Write down any recommendations for further controls/training required.
- Introduce safe systems of work where necessary, and identify any training requirements associated with such systems. Personal Protective Equipment should be considered as a
  last resort. Remember to assign responsibility for control measures/actions to be taken and when these should be completed (columns 8 & 9)
- Taking into consideration control measures applied, re-evaluated Likelihood and Severity rates should be added in rows 10-12.

### 4. Record your findings

- Ensure that identified risks and controls in place are incorporated into the assignment instructions. Sign and date the risk assessment, specifying a review date for re-assessment.

#### 5. Monitor and review

- Ensure a copy of the Risk Assessment is placed on the customer file and saved in relevant electronic file locations and that all personnel affected are made aware of the
  assessment and have signed their acknowledgement.
- Ensure that any identified additional health and safety training is completed and placed on the officers P File.
- Monitor the assessment and review/re-assess if the assessment becomes invalid, an incident occurs on site, there are personnel changes or as new legislation dictates.
