

Tubes

Tata Steel Tubes are an integral component in a wide range of construction, energy and engineering projects across the globe. We manufacture welded steel tubes to fit a myriad of specifications, big and small and using all grades of steel, but all are produced to the same exacting standards of precision and quality. Our steel tubes are developed to meet the specific performance requirements of the construction, transport and pressure containment, energy and engineering industries and can be found in a diverse range of end products.

We have manufacturing sites and sales offices in a number of our European locations including the UK, Netherlands and Belgium, ensuring that we can work closely with our customers and balance our global reach with an understanding of local marketplaces and needs. In the UK, career opportunities within Tata Steel Tubes will generally be based in our Corby and Hartlepool sites.
